

Bikini harnesses are a slimline double wire type of harness, designed to fit easily under costume. They are available in sizes from XS to XL and in black or white as standard with other colours available to order.

The Bikini harness is a versatile harness which allows a variety of positions to be maintained, from upright to horizontal, both forwards and backwards however we do not recommend this type of harness for somersaulting unless you are an experienced aerialist. A version of the Bikini harness is available with detachable shoulder straps.

In theatre and live events when attaching and detaching the harness from the flying wires is time critical a carabiner is often used.

For film and video etc. we can use much smaller, less visible means of attachment.
